## Benefits

# project design

A light blue upward-pointing arrow is positioned to the left of the 'Reliable' circle.

**Reliable**

We use encryption algorithms to maximize the security of our customers ' privacy and business information.

A light blue upward-pointing arrow is positioned to the left of the 'Secure' circle.

**Secure**

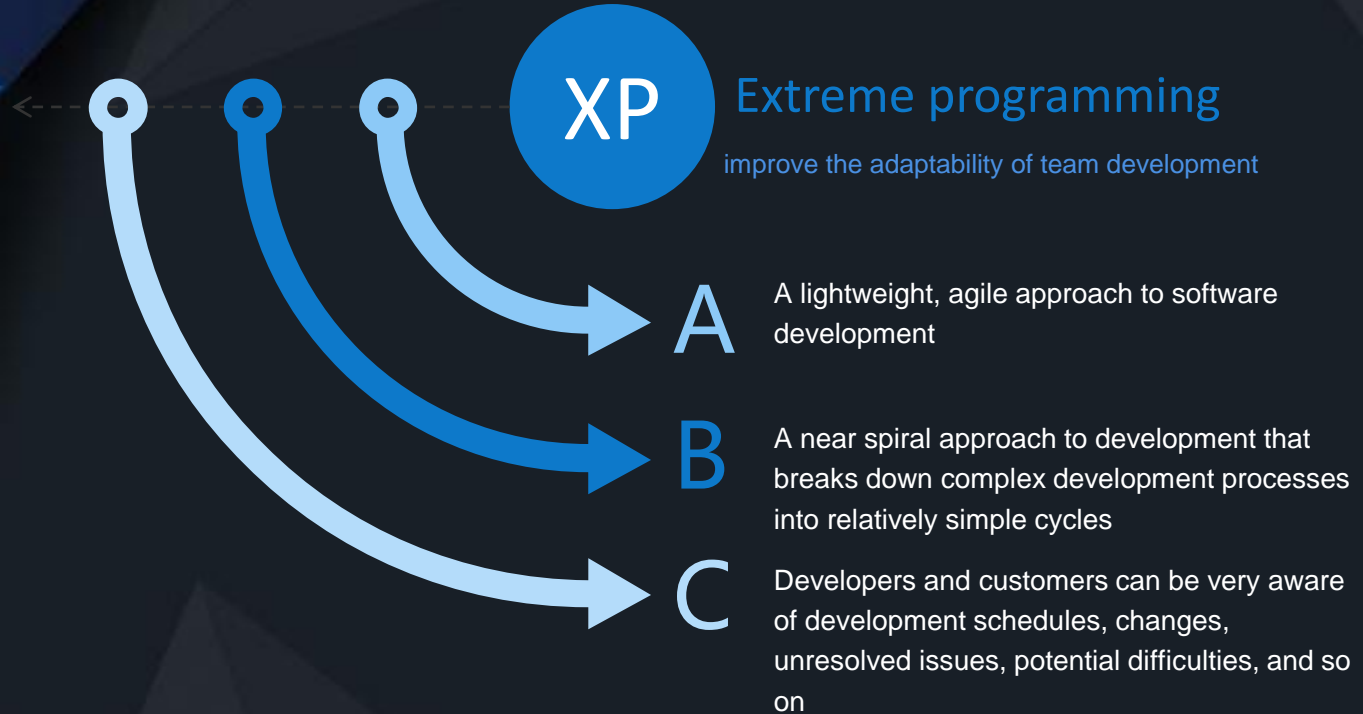

we will use a scalable, easily searchable data storage structure to increase the productivity of the company.

A light blue upward-pointing arrow is positioned to the left of the 'Scalable' circle.

**Scalable**

## Software development methodology

## Front and rear separation

### Improve development efficiency

Development can be done in front and back in parallel, rather than relying heavily as before.

### Reduce server stress

The front end can share a large part of the data processing work, reduce the pressure on the server

Complete the product development with the highest efficiency

# milestone

completed the division of labor

set a company logo

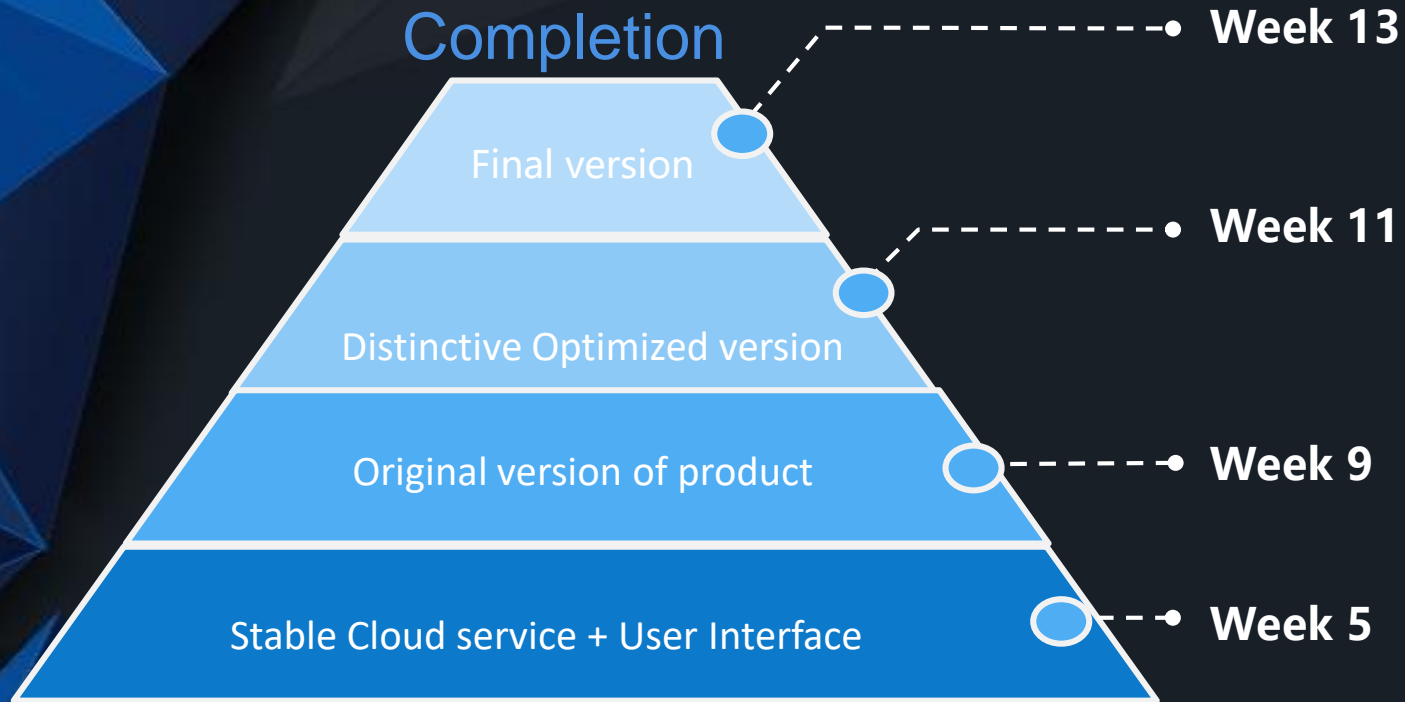

developed a database structure table.
